

Nimbus Cloud Solutions

New Employee Onboarding Guide

1. Welcome and Orientation

All new employees at Nimbus Cloud Solutions attend a mandatory 3-day orientation program starting on their first Monday of employment. Orientation covers company history, product overview, workplace tools, and compliance training. Attendance is tracked, and employees who miss a session must complete a make-up session within their first two weeks.

2. Equipment and IT Setup

Each new employee is issued a laptop, a company email account, and access credentials for internal tools (Slack, Jira, and Confluence) on their first day. IT setup requests must be submitted by the hiring manager at least 5 working days before the employee's start date. Standard laptop models are the Dell Latitude 7440 for engineering roles and the Dell Latitude 5440 for non-engineering roles.

3. Probation Period

All new hires undergo a 90-day probation period from their date of joining. During probation, employees receive a formal check-in with their manager at the 30-day and 60-day marks. Confirmation of employment occurs after a final review meeting at the end of the 90-day period, conducted jointly by the manager and an HR representative.

4. Mentorship Program

Every new employee is paired with a mentor from their department within the first week of joining. Mentors are expected to meet with their mentee at least once a week for the first month, and biweekly for the remaining probation period. The mentorship program is coordinated by the People Operations team.

5. Training Budget

Employees become eligible for the annual training budget of 25,000 INR after completing their probation period. The budget can be used for online courses, certifications, or conference attendance, and must be pre-approved by the reporting manager. Unused training budget does not carry forward to the next year.
